# Arduino UNO Breadboard Instructions

Functional Pins Area   Circuit Parts   Functional Pins Area

As shown in the figure above is a breadboard, and there are many jacks on the breadboard.
Every five jacks in the component plug-in area are connected in a horizontal row.
For example, the five jacks in the same row marked with 1 are connected to each other, and the jacks such as F are prepared for parts, including ICs, resistors, capacitors, and other jacks.
The other two sides of the functional pin area are the plug-in terminals that connect the functional pins of the ArduinoUNO circuit to the breadboard via the female terminal.
The functional jacks for the functional pins are connected to each other in a group of 3 jacks in the entire horizontal row.
About the functional pins of the Arduino UNO 3 electronic circuit, please refer to the Arduino UNO 3 related information for each pin's function and application.
